JINDALUME - Strength That Shines

Jindal (India) Limited, a leader in the steel industry, proudly presents Jindalume—an advanced alloy-coated product tailored for modern construction and industrial applications.

Jindalume combines the best of Aluminium and Zinc: Zinc provides sacrificial protection against corrosion, while Aluminium forms a strong barrier against atmospheric elements. The addition of Silicon enhances adhesion, ensuring superior corrosion resistance and long-lasting durability, even in harsh environments.

Its shiny, spangled appearance is aesthetically appealing, making it suitable for use without paint. Jindalume also offers barrier protection, heat reflectivity, and excellent formability, outperforming traditional galvanized and aluminium-coated products.

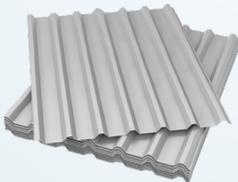

Core Strengths of JINDALUME

Resistant to Corrosion

Long-Lasting Durability

Reliable in All Weather Conditions

Economical and High Efficiency

Look for the JINDAL trademark with the INDIA map to ensure that you're purchasing genuine JINDALUME sheets.
